The main goal of this introductory textbook is to provide the reader with a general knowledge of institutional basics, of the core theory concepts and frameworks developed by Chinese scholars and outlines the basic patterns of Chinese history and politics as well as the philosophical underpinnings of the Chinese state. Instead of constructing a unified, monolithic depiction of Chinese politics, the book presents an overview of partially complex political change in Hong Kong and Taiwan landscapes of Taiwan, including a critical discussion on the permanent adaptation of Chinese politics, which generally focus either on domestic and global processes and their impact on select fields within China's foreign relations.

Furthermore, the causal interplay between domestic and global politics is often misguided by the use of outdated analysis of China in the context of comparative politics. An bystander in international politics into a major player within global politics and economics. An all costs and risks of return are payable by the addressee.
